**SkateWave™ Introduces New 14' Roller Rail**

**Minneapolis – November 21, 2003** – Skatewave, a division of Landscape Structures Inc., has introduced its new 14' Roller Rail, a curved steel rail that allows skateboarders and BMXers to ride directly on to the obstacle. Roller Rails can be used individually or in succession to create a roller-coaster effect for beginner and advanced riders alike.

Advanced riders will use the obstacle to generate speed, or ride up one side of the slope and soar over the backside. Beginners will enjoy the Roller Rail because they do not have to leave the ground to get on the obstacle. This allows them to develop their balance and technique before progressing to more difficult maneuvers.

The Roller rail is 14' long and measures 20" high at its apex. For more information about the Skatewave Roller Rail, please visit the Skatewave web site at [www.skatewave.com](http://www.skatewave.com), or call Skatewave at 1-866-SK8-WAVE (866-758-9283).
